

# Healthcare Voices for Clean Air

Tuesday, July 31st 10—11:45 a.m., lunch provided  
Children's Hospital Los Angeles, Page Conference Room  
4650 Sunset Boulevard

Join a stimulating conversation on the unique role healthcare professionals can play in advocating for clean air for their patients.

As part of the landmark USC Children's Health Study, for the past 20 years scientists have followed thousands of children to determine how breathing different types and levels of air pollutants affects their lungs. Now that the children are older, the USC scientists are analyzing other adverse health outcomes.

**10:00 a.m.** Professor Andrea Hricko, M.P.H., will describe the study's research findings and will discuss new information on "traffic-related air pollution" (TRAP) and its potential impacts on children.

**11:00 a.m.** Lunch served

**11:15 a.m.** Angelo Logan, East Yard Communities for Environmental Justice, will share updates on the campaign to prevent expansion of the 710 freeway and mitigate pollution.

*The PSR-LA Ambassador Program helps physicians to intervene in the policies that affect community health.*

**RSVP by July 26, 2012**
